SUMMARY

Full-stack engineer with production experience building React/Next.js frontends and Python/Node.js backends. Hands-on with REST API design, webhook-driven systems, PostgreSQL and Redis optimization, and AI integrations. Active open-source contributor at venture-backed startups.

EDUCATION

Anjuman Institute of Technology and Management

Bachelor of Engineering in Computer Science

Bhatkal, Karnataka

Sep 2023 – May 2027

EXPERIENCE

Software Engineer Intern

Dec 2025 – Present

Saarthi

Remote

- Architected a secure end-to-end payment processing engine integrating Dodo Payments with webhook-driven event handling and idempotent REST API logic, ensuring 100% transaction consistency across distributed systems.
- Engineered a UX-optimized multi-step checkout interface using React with real-time field validation and proactive error handling, reducing cart abandonment by 22%.
- Optimized backend throughput by implementing Redis caching and PostgreSQL database indexing for high-traffic API endpoints, achieving a 40% reduction in API latency during peak user loads.

PROJECTS

Fake Review Detector | *React.js, TypeScript, PyTorch, FastAPI, DistilBERT, ONNX Runtime*

- Built a FastAPI backend with ensemble models for server-side inference and fine-tuned a DistilBERT transformer using PyTorch and Hugging Face Transformers on a custom dataset, achieving 92–95% classification accuracy.
- Developed a Chrome Extension with client-side ML inference via TensorFlow.js and ONNX Runtime, detecting fake reviews across e-commerce platforms with 85–90% accuracy while processing data locally for privacy.
- Engineered a multilingual NLP pipeline for text classification across 4+ languages with sentiment consistency analysis and linguistic pattern extraction; established CI/CD with Vitest and ESLint.

Nirman Mitra | *React.js, Python, Amazon Bedrock, Rekognition, Step Functions, WhatsApp API*

- Built a React dashboard for contractors and administrators to track verification requests, monitor certificate status, and manage worker records with real-time updates.
- Designed a serverless orchestration pipeline using AWS Step Functions coordinating voice transcription, Amazon Rekognition-based identity verification, document extraction, and certificate generation.
- Built an AI-powered WhatsApp platform enabling construction workers to auto-generate verified employment certificates through voice-first interactions in Hindi and regional languages using Amazon Bedrock LLM.
- Implemented a triple-verification system cross-referencing worker-submitted data, contractor confirmation, and government ID validation to ensure document authenticity.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, HTML, CSS, SQL

Frontend: React.js, Next.js, Tailwind CSS, Vite, Responsive Design, State Management

Backend: Node.js, Express.js, FastAPI, Flask, REST APIs, Webhooks, WebSockets, Socket.IO

Databases: PostgreSQL, MongoDB, Prisma ORM, Redis, Database Indexing

AI/ML: PyTorch, TensorFlow.js, Hugging Face Transformers, ONNX Runtime, Amazon Bedrock, NLP

Cloud & DevOps: AWS (Bedrock, Rekognition, Step Functions), Docker, Git, CI/CD, Vitest

ACHIEVEMENTS

AWS AI for Bharat 2026 | *Shortlisted for Finals*

- Shortlisted for finals for Nirman Mitra, an AI-powered WhatsApp platform built with Amazon Bedrock, Rekognition, and Step Functions.

Open Source Contribution | *InsForge (YC P26)*

- Active open-source contributor** to InsForge (YC P26), contributing to production repositories of a venture-backed startup.

Competitive Programming | *LeetCode, HackerRank*

- Solved 100+ data structure and algorithm problems focusing on clean, efficient, and scalable solutions.
