Summary

Final-year CSE student with **9 months** of production experience across two startups: built a payments platform with idempotent webhook processing, and currently own a news ingestion pipeline across 100+ RSS feeds. Works across **React/Next.js**, **FastAPI**, **Node.js**, and **PostgreSQL**; open-source contributor to **InsForge (YC)**.

Experience

Software Engineering Intern Aug 2026 – Present
LognAi *Remote*

- Own the **news ingestion pipeline** for a supply-chain intelligence platform: **100+ RSS sources** polled hourly into structured events, grouped across outlets into **200+ evolving situations**.
- Raised published output per model call **2.3× (18% → 42%)** and cut **cost per published article ∼30%** by adding a Jev triage pass that scores every candidate before selection.

Software Engineering Intern Jan 2026 – Jun 2026
Saarthi *Remote*

- Built the **payment-processing module from scratch**: an idempotent webhook pipeline (HMAC-SHA256 verification, unique-keyed dedup table, allocation guard) preventing **duplicate charges and license grants** across 5 event types.
- Cut a hot-path lookup **from ∼77ms to ∼0.4ms** by replacing a sequential scan with a composite index, benchmarked on **500k rows**.
- Migrated listing pages from client-only rendering to Next.js SSR/ISR, cutting Lighthouse **mobile FCP 39%** (3.15s → 1.93s) and **LCP 55%**.

Projects

VidyutMitra | *Python, FastAPI, Groq LLM, Sarvam AI, Next.js, Supabase*

- Built a **WhatsApp-native energy advisor**: bill photos run through a vision pipeline, 9-rule schema validation, and 3 deterministic tariff engines, replying in **under 15s**.
- Added a **regex hallucination guard** checking every LLM-generated number against a deterministic fact-pack, backed by **110+ tests**; Kannada voice replies via Sarvam AI TTS.

IJESTM | *React, Node.js, Express, MySQL, JWT, Socket.io*

- Built the college's **official peer-reviewed journal platform**, **live in production**: 55+ REST endpoints over a 13-table MySQL schema, with 5-role RBAC and per-paper ownership and reviewer guards.
- Implemented the full review workflow (tokenized reviewer invites, autosaved drafts, versioned revisions, DOI on publish), secured with JWT refresh tokens and rate limiting, plus Socket.io notifications.

Technical Skills

Languages: JavaScript, TypeScript, Python, HTML, CSS, SQL
Frontend: React.js, Next.js, Tailwind CSS, Vite, Responsive Design, State Management
Backend: Node.js, Express.js, FastAPI, REST APIs, Webhooks, WebSockets, Socket.IO
Databases: PostgreSQL, MongoDB, Prisma ORM, Redis, Database Indexing, MySQL
Cloud & DevOps: AWS, Docker, Git, CI/CD, Vitest

Education

Anjuman Institute of Technology and Management Bhatkal, Karnataka
Bachelor of Engineering in Computer Science *Sep 2023 – May 2027*

Achievements

Hackathons

- **1st Prize, Build for Billions (NITK Surathkal)**: led a 4-member team through the 24-hour final, **100+ teams**.
- **Category Winner (Best Use of Entire)**, DEV Hacktoberfest 2026 Weekend Challenge: built Viva, an AI mock interviewer aware of which parts of your project an AI wrote; DEV's most-entered challenge.
- **Top 5** at Coastal Innovation Hackathon 2026 (**150+ teams**), PÆTRIX × HACK SUBMIT 2026, and Sahyadri SOSC; **Finalist**, AWS AI for Bharat.

Open Source | *InsForge (YC P26)*

- Merged **8 PRs**, including **realtime-channel presence tracking** (live join/leave) and a production bug fix.
