SUMMARY

Final-year CSE student with 6+ months of internship experience building production features end-to-end, React/Next.js on the frontend, Python/Node.js, REST, and webhook-driven systems on the backend. Open-source contributor to a YC-backed startup, with AI-integration projects across the stack.

EXPERIENCE

Software Engineering Intern

Dec 2025 – Present

Saarthi

Remote

- Built the payment-processing module from scratch with an idempotent webhook pipeline that prevents duplicate charges and license grants by design, HMAC-SHA256 verification, a unique-keyed dedup table, and a recent-window allocation guard across **5** event types.
- Cut a hot-path lookup from **~77ms to ~0.4ms** (sequential scan → index scan) on a 500k-row dataset through composite database indexing, within a **27**-index payments schema.
- Migrated high-traffic listing pages from client-only rendering to Next.js SSR/ISR, cutting mobile FCP **~39%** (3.15s → 1.93s) and LCP **~55%**, with listing content now server-rendered for crawlers (**10** listings in server HTML versus **0** before).

PROJECTS

VidyutMitra | *Next.js, React, TypeScript, Python, FastAPI, Groq LLM, Sarvam AI (TTS), Supabase*

- Architected a WhatsApp-native energy advisor on a Python/FastAPI backend, processing bill photos through a vision pipeline with **9-rule** schema validation and **3** deterministic tariff-analysis engines at **sub-15s** end-to-end latency.
- Engineered an LLM compose layer (Groq Llama 3.3 70B) with a regex hallucination guard validating every model-generated number against a deterministic fact-pack, backed by a **110+**-test suite.
- Integrated Sarvam AI neural TTS for native Kannada voice output, paired with a Next.js + TypeScript analytics dashboard, enabling voice-first accessible interaction.

IJESTM | *React, Vite, Node.js, Express, MySQL, JWT, Socket.io, Tailwind CSS*

- Built the official peer-reviewed journal platform for the college, live in production, a role-based access-control system enforcing **5** roles with per-resource guards for paper ownership and reviewer assignment.
- Designed a full peer-review workflow, submission, tokenized email reviewer invitations, autosaved review drafts, editorial decisions, and versioned revisions, over a **13**-table MySQL schema spanning **55+** REST endpoints.
- Secured the API with JWT refresh-token auth, bcrypt, helmet, and rate limiting (**100** req/15 min), and added Socket.io real-time status notifications, Multer uploads with PDF/DOCX parsing, and DOI assignment on publish.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, HTML, CSS, SQL

Frontend: React.js, Next.js, Tailwind CSS, Vite, Responsive Design, State Management

Backend: Node.js, Express.js, FastAPI, REST APIs, Webhooks, WebSockets, Socket.IO

Databases: PostgreSQL, MongoDB, Prisma ORM, Redis, Database Indexing, MySQL

AI/ML: PyTorch, TensorFlow.js, Hugging Face Transformers, ONNX Runtime, NLP

Cloud & DevOps: AWS (Bedrock, Rekognition, Step Functions), Docker, Git, CI/CD, Vitest

EDUCATION

Anjuman Institute of Technology and Management

Bachelor of Engineering in Computer Science

Bhatkal, Karnataka

Sep 2023 – May 2027

ACHIEVEMENTS

Open Source Contribution | *InsForge (YC P26)*

- Merged **8** PRs into InsForge (YC P26), including a realtime-channel presence-tracking feature (live join/leave updates and active-user state) and a bug fix to production repositories, alongside documentation improvements.

AWS AI for Bharat 2026 | *Shortlisted for Finals*

- Shortlisted for finals for Nirman Mitra, an AI-powered WhatsApp platform designed with Amazon Bedrock, Rekognition, and Step Functions.
